

PATIO DOORS

LET LIGHT IN. LET LIFE OUT.

UNITECH
WINDOWS & DOORS

Transform your home with the perfect blend of modern engineering and timeless style. Unitech's High-Performance Vinyl Patio Doors are designed to do more than just open up a room—they're built to enhance your lifestyle, protect your home, and slash your energy bills.

1 **VINYL (PVC)** PATIO DOOR

Vinyl patio doors are considered the essential style for your home because they combine energy efficiency, low maintenance, and timeless design that fits any décor.

2 ALUMINUM/VINYL **HYBRID** PATIO DOOR

The aluminum/vinyl hybrid patio door is prized for combining sleek aluminum frames with durable vinyl, offering modern style, strength, energy efficiency, and advanced features.

3 **PREMIUM BIFOLD** ALUMINUM PATIO DOOR

Aluminum bifold doors are the pinnacle of patio doors because their sleek, slim frames, expansive glass panels, and durable, smooth-operating design create the ultimate blend of style, strength, and indoor-outdoor living.

1 2-PANEL VINYL PATIO DOOR

2 ALUMINUM/VINYL HYBRID PATIO DOOR

3 PREMIUM ALUMINUM BIFOLD PATIO DOORS

Key Features:

VINYL (PVC)

Energy-Efficient Glass Packages – LoĒ coatings with argon gas reduce heat loss, improve comfort, and lower energy bills.

Heavy-Duty Vinyl Frame Construction – Multi-chamber extruded PVC frames resist warping, rotting, and peeling while improving insulation and structural strength.

Reinforced Panels & Smooth Rollers – Steel or aluminum reinforced stiles combined with precision tandem rollers ensure effortless, long-term sliding performance.

Advanced Weather Sealing – Full-perimeter weatherstripping, interlocking meeting rails, and sloped drainage sills prevent drafts, air infiltration, and water penetration.

Modern Locking Hardware- enhances security and improves door panel alignment when locked.

ALUMINUM/VINYL HYDRID

Stronger Structure – Aluminum reinforcement adds rigidity and prevents sagging or warping, especially on large glass panels.

Better Energy Balance – Vinyl improves insulation while aluminum maintains strength, delivering durability without sacrificing thermal performance.

Low Maintenance, Long Life – Vinyl won't rot, rust, or need painting, and the aluminum core increases longevity with minimal upkeep.

PREMIUM ALUMINUM BIFOLD

Wide, Seamless Openings – Bifold panels fold flat to the side, creating large, uninterrupted openings that blur indoor-outdoor living.

Slim, Modern Frames – Aluminum's strength lets you have thinner sightlines than vinyl or wood, maximizing glass area and natural light.

Exceptional Durability – Aluminum resists rust, corrosion, warping, and weathering, so the doors stay square and trouble-free for years.

Smooth, Reliable Operation – Precision hardware and strong tracks allow heavy panels to glide easily and stack neatly.

Custom Style & Finishes – The designs offer clean, contemporary looks with many powder-coat color options and configurations to match your home.

QUALITY FEATURES & ACCESSORIES

TRIPLE PANE

DOUBLE PANE

CARDINAL Glass Industries **LOĒ GLASS**

Low Emissivity, or LoĒ, glass helps keep homes warmer in winter and cooler in the summer by increasing energy efficiency and reducing the transfer of heat or cold through the glass.
